

Response to EdReports.org's Evaluation of Math Expressions

Math Expressions was developed by a reviewer of the CCSS-M and one of the writers of the Learning Progressions. The program offers many resources that were not included in the review process, including digital and assessment materials that reflect student conceptual understanding, fluency checks and performance tasks. These resources are a fundamental part of the curriculum.

HMH is fully committed to working with our customers; our focus is and will continue to be ensuring our programs align to the standards to which they are being held accountable. We feel that the success and alignment of our content is reflected in the feedback we receive from teachers, school districts and State Boards of Education.
